

**BOCO**  
PARDUBICE

REFERENCE LETTER - CAPACCO SPOL. S.R.O.

English 

Date, 5 August 2014

We used to use older single-screw extruders in our company Capacco. Their biggest disadvantage was high energy demand and the need of absolutely dry input material. We had to pre-dry it which was very costly and it even increased energy consumption disproportionately.

The new extruder that was supplied by the company BOCO PARDUBICE machines, s.r.o. has an integrated drier and degassing of the barrel. The energy demand for production has significantly decreased and the quality of the final product has improved.

We would like to say thank you for help to the company BOCO as they provided development and increase in quality of our products. We also appreciate their professional and friendly approach.
